

# GeoCast® Web™

## Emergency Notifications

**GeoCast® Web™** is an emergency warning tool used to make rapid emergency telephone notifications to residents and businesses in precise geographic areas. GeoCast will be used by City of Dallas emergency officials, *during emergencies only*, to deliver incident-specific information or potentially life-saving instruction to those in the affected area(s).

### How It Works

GeoCast integrates mapping technology with phone databases, and will automatically call listed and unlisted landline telephone numbers for Dallas (city) residents and businesses.

**You must sign-up to receive these emergency notifications on your mobile phone.**

To register your mobile phone (or for more information), visit: [www.dallascityhall.com/oem](http://www.dallascityhall.com/oem), or contact the Office of Emergency Management.

### Dallas' Comprehensive Emergency Warning program

GeoCast is used in conjunction with other warning and alerting systems. No single tool will provide enough warning to all residents in all situations. GeoCast is only one component of the overall warning system and should not be seen as the only means of emergency notification.
